

# MARVIC

WHEELS & MAGNESIUM COMPONENTS

## TECHNICAL EQUIPMENT

All the Marvic wheels are equipped with high quality assembling components. The equipment includes fast sliding bearings, dumper rubbers, the sprocket carrier (cast in magnesium or billet in aluminum) and anodized spacers made of Ergal 7075 T6. If required helicoils are also provided to preserve the threads. Customized aluminum 90° air valves are also included

### Sprocket carrier

The sprocket carriers provided by Marvic can have different technical characteristics. Billet in Ergal 7075 T6 alloy or cast in magnesium, with five or six hole, all the sprocket carriers supplied by Marvic represent a real added value thanks to their lightness and strength. Essential and extremely functional they all are accompanied by light and high quality assembling components, assembled with the utmost care.

### 5 and 6 holes sprockets

The sprocket carriers supplied by Marvic always require a special sprocket not provided by the company.

The sprocket carrier provided can hold a sprocket with 5 holes  $\varnothing 10.5$  mm – pcd  $\varnothing 100$  mm, centering  $\varnothing 76$  mm or a sprocket with 6 holes  $\varnothing 10.5$  mm – pcd  $\varnothing 100$  mm, centering  $\varnothing 80$  mm according to the different applications.
